1. Extract the zip folder. There will be two files: **project1_Abhik.py** and **project1_Abhik.ipynb**
2. Python version 3 is required
3. Libraries required to run the program. If not, need to be installed using pip command:
    a. Numpy
    b. Pandas
    c. Scipy
    d. Sklearn
    e. Matplotlib
4. Place the datasets in the folder structure **Data/DataFolders**. The python objects should be placed on the level **Data** Folder
5. Run from Jupyter Notebook:
    a. Open Jupyter notebook in Windows or Linux:
        i. Open the file project1_Abhik.ipynb and click Run all Cells from:
            Cells > Run All Cells
    b. For project1_Abhik.py, open a command prompt and navigate to the folder where the file is saved. Run the below command:
        python project1_Abhik.ipynb
